

TRUSTY BASKET with bags purveyor

STRUCTURE: entirely realized in zinc plated steel plate thickness 10/10 moulded with technology laser and opportunely folded. The superior form, the dispenser, allows the taking of the bags (not provided) while the inferior form allows the harvesting of the waste.

Provided of internal bags-strap and back opening for an easy removal of the waste.

FINISHING: The parts in zinc plated steel undergo at first a process of preliminary treatment of degreasing of the impurities through saline of vapour, subsequently dried and submitted to operations of painting through electrostatic pistols that cover the pieces with paint dust to the chalky state. Then the artifact is submitted to polymerisation in oven, that is a process that allows the dust to solidify cooking at a temperature of 180/200C in an oven to hot air circulation. The pieces went out of the oven are cooled naturally. The dusts used in the process of painting are non-toxic according to current regulations. Colouring RAL to customer's choose.

Ironware and nuts and bolts: zinc plated according to UNI Standard 3740

Envelope: cm. 30 x 20 x 100 h.

Anchorage: close to the ground
