

305L Baby slide with wooden stair

Realized with northern trilamellar pine wood impregnated in autoclave with non-toxic salts according to European Standard EN 1176. The whole structure is constituted by poles of sec. cm. 9 x 9 with rounded corners to ensure the maximum security. Stair realized with elements of climb (steps), in grained galvanized steel plate or in polyethylene or multilayer of birch (carply), with lateral sides in polyethylene. Polyethylene avoids that the parts of the stair (handrail and sides) have dangerous splinters. Polyethylene slide manufactured from 6 mm thick rotationally moulded high density, UV Stable and with a characteristic final wave.

Age of use: 3-8

Decks height: cm 95

Game dimensions: cm 235x88

● **Minimum space required:** cm 585x388

● **Safety floor required:** mq 18,00
